

HOW TO RUN CDE LESSONS FROM A NETWORK LOCATION

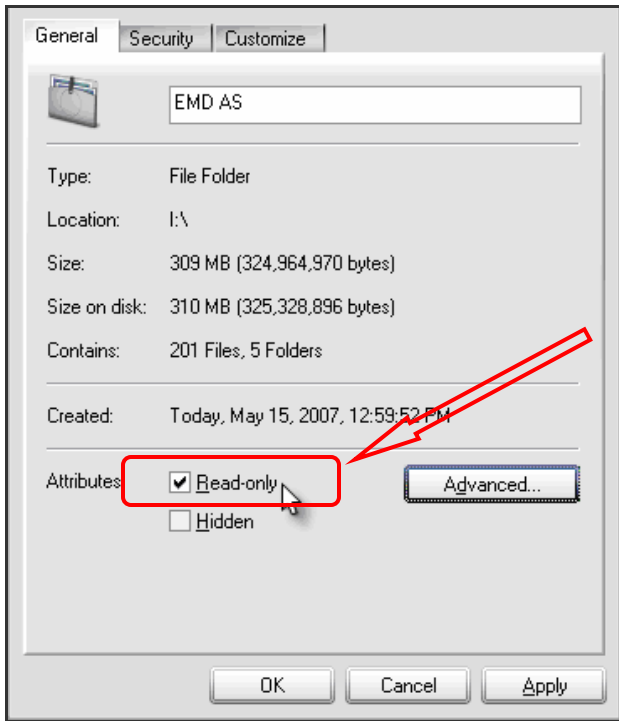

Installation:

1. Run Setup.EXE to install the CDE on the server network path or copy the lesson folder and all subfolders to the desired destination.

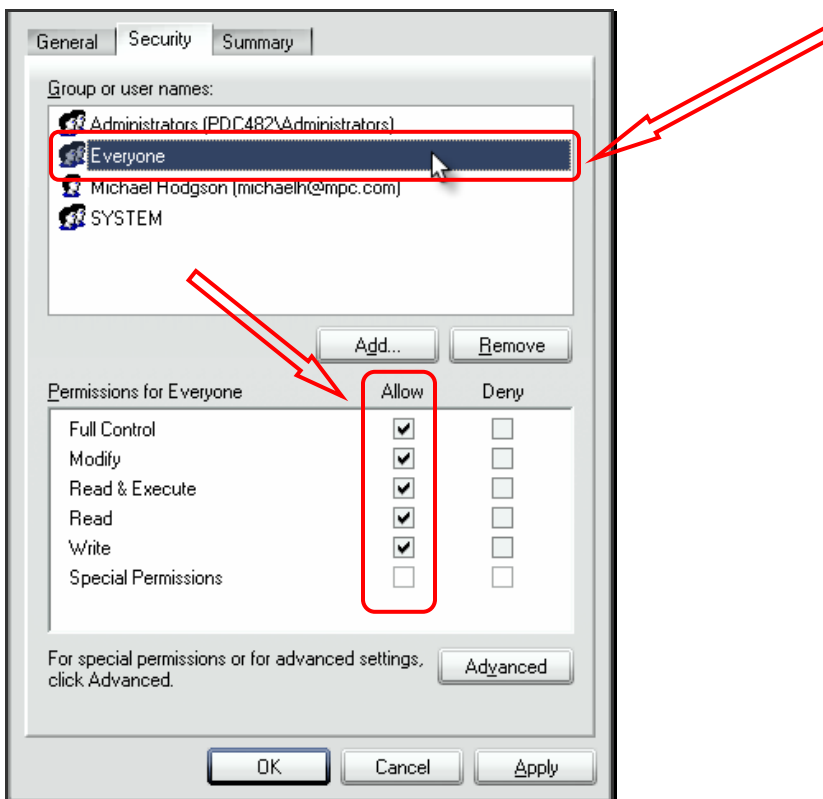

2. Create a folder named "Data" within the CDE parent folder. For example, if the CDE lesson files reside inside a folder named "EMD AS" then you can create the "Data" folder within the "EMD AS" folder.

3. All CDE lesson files must be read-only.

4. All CDE users must have full read & write access to the “Data” folder and at least read access to the parent folder.

Notes:

1. CDE lessons search the parent directory for the “Data” folder. If the folder is not found, they search the parent’s parent folder. If the folder is still not found, they look to the default location C:\Program Files\Priority Dispatch\Training\data\. If no data folder is found the CDE book marking and login features will not work.
2. If the CDE lesson files are not read-only, users may get “File in use” errors and the lesson may not function correctly.
3. The CDE lessons have not been designed to be bandwidth friendly. Performance issues may occur if running over a PIX or any other access point with low bandwidth.
4. If the CDE media files are not installed with the CDE lesson files on the server, the user will need to insert the correct CDE CD into a local CD drive prior to running the lesson. Each user also needs Quicktime installed to view the media files.
5. Current lessons with network sharing support.
 - CDE 30+
 - NAF CDE 6+
 - NAE NewPAI’s v3 (with .exe modification date 2-2-2007)
 - NAF NewPAI’s v2 (with .exe modification date 2-2-2007)
 - EUG NewPAI’s (with .exe modification date 2-2-2007)
 - CAN
 - ETC-I Recertification CD
